Inventory software for multi warehouse with ERP functions

In today's competitive marketplace, inventory management control is one of the most vital processes of any manufacturing or distribution business. Businesses require timely and accurate information on inventory location, movement and valuation. Getting product or material in and out of the door faster, for less money and with fewer errors, along with meeting the needs of customers, and have specific delivery instructions, are necessary for survival in today's business climate.

A Inventory Management module is a complete stock management system that keeps track of stock levels, stock valuation, and stock activities. It is a multi-warehouse based system that provides up-to-date information on quantities and tracking of stock movement. Powerful functionality allows you to account for every transaction in your dynamic warehouse environment. Use the integrated reports to analyze, monitor and manage your enterprise inventory of finished goods, raw materials and supplies.

Auspac system enables you to quickly view inventory levels for multiple locations throughout your enterprise. It automates the processes for inventory management, all necessary documentation, and real-time inventory updates. It provides customers an immediate response on product availability. Full transaction history allows management to spot trends, analyse sales and profitability while preventing overstocking and ensuring that customer demands are met without lost sales. This software can be used either as a stand alone inventory control system or as part a Auspac ERP solution.

System Features

- A separate inventory of each inventory item can be maintained at any number of locations
- Inventory can be physically counted without interrupting the normal sales order entry process
- Instant on-line entry of issues, receipts, adjustments and transfers with one entry
- Interface with handheld data collector to accept inventory transaction data
- Maintain separate units of measure for stocking and costing
- Reduce required inventory by maintaining the appropriate stock balance
- Reduce your total inventory, reduce your inventory holding cost, and still avoid out-of-stocks
- Maintain multiple warehouses
- Generate inventory analysis for management
- Express the value of your inventory in financial terms
- Maintaining reason for each transaction
- Handles weighted average costing & standard costing
- Auto increase and decrease of stock upon integration with Auspac Purchasing and Sales modules
- Stock taking for physical counts
- Physical Count worksheets simplify the physical count process and speed data entry.
- A variance report provides data highlighting the difference between current physical count and the count shown in the system.
