Customizable ERP Solutions Give Insight for Future Growth

ERP stands for Enterprise Resource Planning. Auspac ERP is a total integrated solution that attempts to integrate all the functions and departments across a company. With more than 20 standard modules and many industry-specific add-ons, Auspac ERP can be tailored to meet your business needs today, and as you grow, it can expand to accommodate your company's requirements long into the future. The magic of ERP is that the business benefits only get better as additional business processes are integrated into the system.

- Automated system improves methodology, eliminates unnecessary manual operations, systematized follow up and tracking of trends. Improve business process and profitability by better records keeping, systematic and workflow automation.
- A near real-time access and reporting provides instant access to organization's information and approval procedure to increase efficiency on relevant departments' decision making. Enable up-to-date reports to be generated accordingly to ensure effectiveness and efficiency.
- An open-architecture relational database system that could be interfaced with many 3rd party software such as Report Writers, SQL Query, etc.
- Near fully integrated solution shall harmonize all departments, bringing the entire organization closer to a paperless environment. Ensure accurate information and non-redundant data throughout the organization to be properly maintain.
- System built around existing hardware to reduce initial investment in new hardware purchase.
