

AUSPAC MATERIAL REQUIREMENT PLANNING (MRP)

Reports Available:

- Material Order Status
- Material issued Control Sheet
- BOM Report
- BOM Structure Listing
- Order Release Notice
- Future Planned Notice
- Rescheduling Notice
- Cancellation Notice
- Performance Report
- Monthly Material Calculation
- Material Requirement Summary
- Material Calculation
- Total Material Calculation

MRP: Completeness, Timeliness and Accuracy

MRP have been installed almost universally in manufacturing firms, even those considered small. Auspac MRP is a logical, easy understandable approach to the problem of determining the number of the parts, components and material needed to produce each end-products based on the specific time schedules.

Auspac MRP involves getting material on hand when needed for production or sales. Which document provide four basic items of information, when to order, how much to order, who to order from and when the items need to be on hand. Auspac MRP compares the demand of the materials of the existing inventory and suggests purchase order where shortages are projected. Our systems are designed to keep track of all the changes and able to re-scheduled the production activities.

Master Production Schedule (MPS) is the schedule for end items. It states the quantity and timing of production of specific end items in which determine the available-to-promise of the end products and calculates the replenishment plans. Multi-level BOM describes the structure of the product from level to level, the components needed to make the parent items. Inventory Status contained much more additional data, such as vendor identity, cost, lead-time gross requirement and on-hand requirement. The goal of the Auspac MRP document is to supply information that will enable the company to have enough inventory on hand to fulfill demand, (and no more) available only when needed, (and no sooner) at a quality level that meets specification, (but does not have to exceed it) and at the lowest price.
