## Fully Integrated Retail POS System

A Point of Sale system (POS), featuring a computerized cash register, can do much more than a normal cash register. While a Cash Register has a single purpose, that being to tell you how much money your business has taken in during the day. Auspac POS can tell you much more information such as sales analysis and daily performance. Furthermore, POS manages to breakdown profit numbers into detail, itemize the inventory monitoring and tally the cash that collected in each cash drawer.

Auspac POS provides a complete online and comprehensive system with real-time data exchange and integration against the retailing points. With the combination of powerful capabilities and easy to use feature into one software application enable Auspac POS to be an outstanding solution to existing fast moving retailing. Reports and receipts can be printed on report printer or separate receipt printer. Cash drawer, bar code scanner, pole display and programmable keyboard can also be integrated to the system as necessary.

Auspac POS Improve data accuracy, methodology, eliminates unnecessary error in manual operations and intermediate-stage handling; systematize monitoring and recording of stock movement. It is easy to use, inexpensive, and true windows based system that can integrated with Auspac backend solutions to include Accounting, Purchasing and Inventory modules.

## System Features

- Promotions - free items, department discounts, timed-specials, bulk discounts
- Multi-store support - Inter-branch transfers with sale consolidation
- Support item labeling such as bar-coding
- Full network support with data transfer via network or storing media

## Why Computerized POS

### Reduce Theft

By computerising, you can reduce theft in your business because your employees become more involved in watching the store inventory if they know that every piece of inventory in your business is being monitored.

### Reduce Inventory Shrinkage

By watching your inventory and comparing in store inventory to your computerised reports, both you and your employees are much more careful about giving away inventory, as well as checking inventory as the items enter your store.

### Reduce Over Stock

By watching your inventory reports, you can make orders accordingly. This will reduce over stock items.

### Increase Your Inventory

Many business order products based on what they think they sell. With computerised history reports, it gives you a good idea when to increase your inventory in order to meet the demands for certain period of the year. This will increase your efficiency and profit.

### Watch Your Margins

By reading your profit margin reports it will help you to stock more products that give you greater profits and fewer products that give you the least amount of profit.

### Speed Customer Checkout

Computerising speeds up your customer checkout. With a barcode scanner, you can checkout a customer in half the time required with a cash register.

### Accuracy

Every item in your store has a price associated with it. Never again will you have to figure out how much a less popular item sells for. Your cashier will stop guessing those prices.

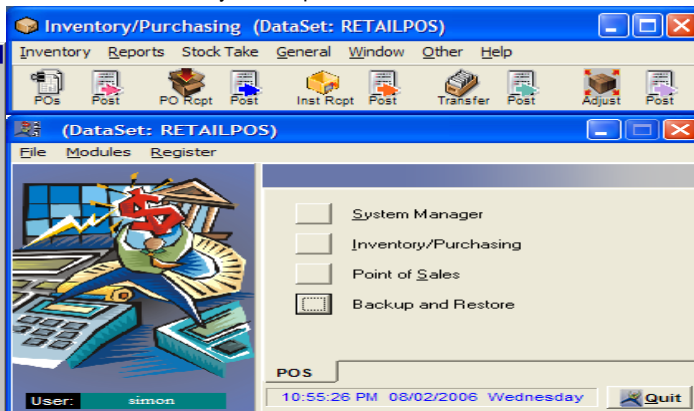

### Keep Track of Your Customers

Your best customers are your present customers. Keeping a customer list is an obvious asset. Mailing to your customers periodically keeps them coming back. With a POS system, mailing to your customers is easy. Every mailing to your customer list will always be a positive to your cash flow.
